We Can Secure Our World Animation: Software Updates, Audio Description

Max, his mother, and Joan the Phone appear on a hiking trail in an animated world and sing, "We can secure our world!"

Close-up on Joan as a notification appears on her screen. "Update!" she says, as the word **Update** appears on screen.

Pan out to Max and his mom Eva on the trail with Joan. "Ugh, do it later!" says Max.
"Not so fast, Max," says Eva. "Software updates keep your information safe," says Joan. "Let's do it now."

Joan breaks into song as we follow the sun crossing the sky, "When it's time to update, don't delay." **Don't delay** appears in the sky. "Install those software updates right away." We hear Eva chime in, "Do it today!" as the words **Do it today** appear on a trail sign.

Joan sings, "They fix bugs that could put you in danger," as bugs swarm around her, and she waves them away. "You don't want your info to get hacked by a stranger," she continues, as a bear appears and then flees in the glare of Joan's flashlight. "Keep it safe!" says Max.

Joan, Max, and Eva sing, "We can secure our world!" as a shooting star streams across the sky and owls settle in the trees.

Joan continues, "Go to your settings, and with just a quick tap, turn on automatic updates, it's as easy as that." We see Eva go to the settings of her smart watch. The words **Automatic Updates** appear, along with a settings slider indicating they're **ON!** Eva says, "That was easy!"

The trio has reached the campsite where Max's dad, Kevin, is making s'mores by the fire. Joan sings, "Automatic updates sure are great. Set it and forget it, one less thing on your plate." Joan grabs a s'more, and Kevin shouts, "Don't wait!"

Joan plays the guitar as everyone sings the final chorus, "Install updates, don't wait any longer. Make it automatic to make your defense stronger. That's how we can secure our world!"
