

TRIPwire combines expert analyses and reports with relevant documents, images, training, and videos to help first responders and security professionals prevent, protect against, respond to, and mitigate the destructiveness of bombing incidents.

Membership Eligibility

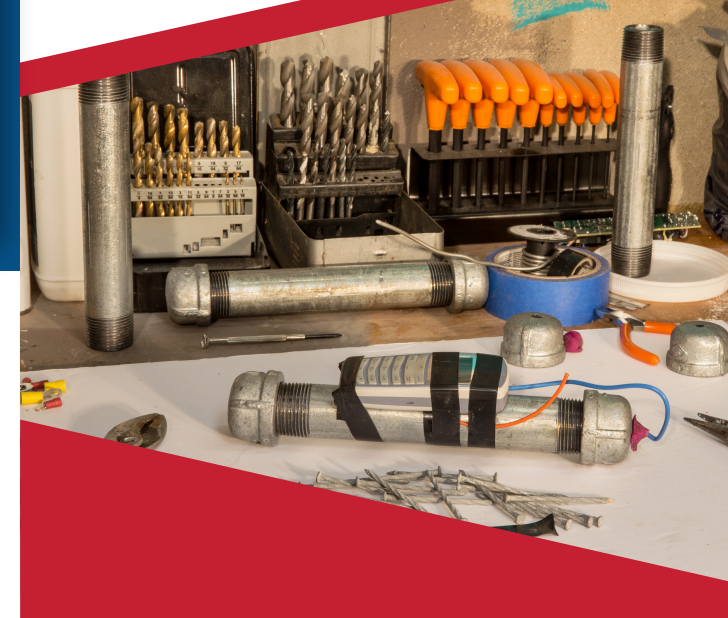

Those eligible for TRIPwire include public safety bomb technicians; canine handlers; emergency services, military, and government personnel; intelligence analysts; and critical infrastructure owners, operators, and security professionals.

Access to TRIPwire is free and registration is open to all members of the bombing prevention community courtesy of the Cybersecurity and Infrastructure Agency (CISA) Office for Bombing Prevention.

The CISA Office for Bombing Prevention has a mission to enhance national security by building public and private capabilities to **deter**, **prevent**, and **respond** to bombing incidents.

For more information regarding bombing prevention programs, contact: obp@cisa.dhs.gov

TRIPwire
Technical Resource for Incident Prevention

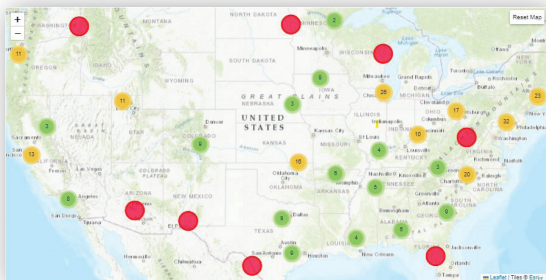

FREE, SECURE, UNCLASSIFIED RESOURCE PORTAL

- ✓ For the Nation's security and emergency services professionals across the federal, state, local, tribal, territorial (FSLTT), and private sectors.
- ✓ Designed to increase awareness and help users deter, prevent, and respond to improvised explosive device (IED)-related incidents.

TRIPwire.cisa.gov

Data and Trend Analysis

Leverage TRIPwire to understand risks to your community using the Incident Map and TRIPwire's Weekly and Monthly Domestic IED reports.

What's New

This notification highlights significant domestic and international IED-related incidents and includes a summary and visual context. The What's New provides situational awareness to the Cybersecurity and Infrastructure Security Agency (CISA), FSLTT, and private sector stakeholders.

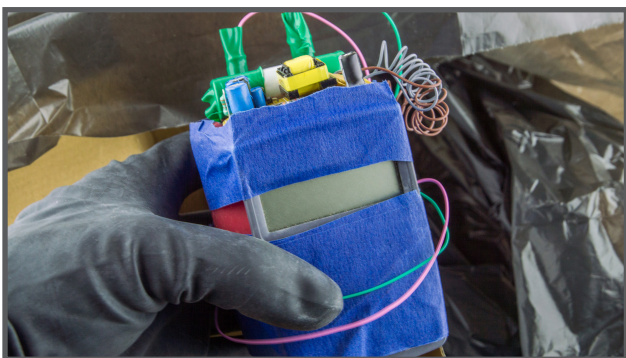

Easy access to key information and resources

Emergency Responder Notes (ERNs)

These notes are designed to increase first responder awareness of emerging threats. The CISA Office for Bombing Prevention subject matter expert recommends developing topics of concern for the first responder community on issues such as IED components. These products are intended to assist the bomb technician and first responder communities.

"TRIPwire is exactly the kind of support local law enforcement needs on the federal level to combat and to interdict terrorism."

**— Chief William Bratton,
Former LAPD, NYPD Police Chief**

TRIPwire Awareness Bulletins (TABs)

These bulletins provide information and analysis on tactics, techniques and procedures used by malicious actors in domestic and international explosives-related incidents. TABs also provide information and analysis cited in threat actors' propaganda. This product is intended to provide situational awareness to CISA and FSLTT stakeholders.

Training

TRIPwire provides access to a vast array of courses that provide general counter-IED information to a broad audience. Most classes are one hour and can be taken independently. These courses are designed to provide counter-IED information to enhance awareness and response to threats.

Requests for Information (RFIs)

Targeted Infrastructure Trend Analysis Reports provide data visualization or a simple data pull with talking points for device-related incidents in specific sectors over a set date range or issues of concern for the affected sector.

Incident-Type Trend Analysis Reports provide data for a set location and time range, allowing the stakeholder to understand the issues affecting their area.

Geographical Trend Analysis Reports depict IED-related information by state, region, or nationally and include region-specific highlights, national details, graphics, and talking points.
